VTX Clan Leaderboard Points System

Chapter 7, Season 4 — Manual Scoring Guide (updated 15 October 2026)

This guide explains how to calculate each member's leaderboard score using their Fortnite Tracker profile (fortnitetracker.com) and their PR (Power Ranking). Take a screenshot of each member's Overview page for the current season (Ch.7 Season 4) and pull the numbers listed below.

What's new in this version

Change	Details
PR points added	Each PR is worth 25 points (see section 4).
Unrated rank	An "Unrated" rank now officially scores 0 points.
Final score ÷ 10	The raw total is divided by 10 to give the leaderboard score (see section 5).

1. Stats to Pull From Fortnite Tracker

Go to fortnitetracker.com and search the member's exact in-game name. All the numbers you need are on the front page of their profile (the "Overview" tab, which loads by default).

> **IMPORTANT:** Before reading any numbers, check the "Season" filter near the top of the page. It must be set to the CURRENT season (e.g. "Ch.7 Season 4") — not "Lifetime" and not an old season. Check this for every member, one at a time.

Stat	Where it appears
Battle Royale Rank	All Ranks section — "Current" rank under Battle Royale
Reload Rank	All Ranks section — "Current" rank under Reload
Kills	Overview stat block
Wins	Overview stat block
K/D	Overview stat block
Top 3/5/10	Overview progress bar
PR (Power Ranking)	Player's PR total (ask the player or check their PR profile)

Note: "Top 6/12/25" is shown for context but is NOT scored. Only Top 3/5/10 counts.

2. Rank Tier Points

Scored separately for Battle Royale rank AND Reload rank, then added together.

Tier	Unrated	Bronze	Silver	Gold	Platinum	Diamond	Elite	Champion	Unreal
Points	0	0	10	20	30	40	50	60	70

Use the player's CURRENT rank, not their all-time best. Ignore the division number (Platinum 1, 2 or 3 all score 30).

3. Stat Bonus Formulas

Category	Formula	Purpose
Kills	Kills ÷ 10, rounded down	Rewards fragging output
Wins	Wins × 5	Rewards closing out matches
Top 3/5/10	Count × 1	Rewards consistent placements
K/D bonus	(K/D – 2.0) × 5, only if K/D is above 2.0, rounded down	Extra reward for kill efficiency
PR	PR × 25	Rewards tournament results

If K/D is 2.0 or below, the K/D bonus is 0 — do not subtract points.

K/D bonus examples

K/D shown	Calculation	K/D Bonus
1.50	Below 2.0 — no bonus	0
2.00	Exactly 2.0 — no bonus	0
2.60	(2.60 – 2.0) × 5 = 3.0	3
3.84	(3.84 – 2.0) × 5 = 9.2	9
5.00	(5.00 – 2.0) × 5 = 15.0	15

4. PR (Power Ranking) Points

PR is earned by placing well in tournaments against strong players, so it is harder to get than normal stats. Each PR is worth **25 points** (the same as 5 wins).

Examples: 0 PR = 0 points · 5 PR = 5 × 25 = 125 points · 12 PR = 12 × 25 = 300 points

> **Decide as a clan:** PR is usually a lifetime total. If you score the full PR every season, the same PR is counted again each time. To keep it fair, you can count only the NEW PR earned during the current season.

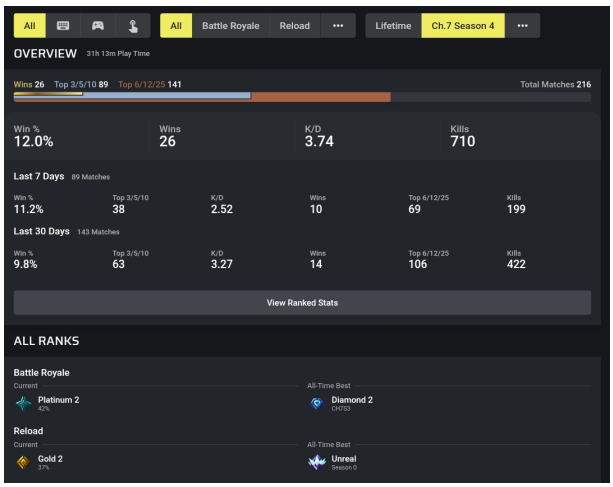

5. Final Leaderboard Score

Add all seven results to get the **raw total**. Then divide by 10 to get the **leaderboard score**, rounded to one decimal place (or to a whole number if you prefer).

> **Leaderboard score = (BR Rank + Reload Rank + Kills + Wins + Top 3/5/10 + K/D bonus + PR) ÷ 10**
>
> At the end of the season, add this score to the player's current leaderboard points.

6. Real Example — VTX_-TOXIC

Below is a real Fortnite Tracker screenshot. The Season filter is set to "Ch.7 Season 4", so the data is valid for scoring.

Step 1 — Confirm the season: The Season filter reads "Ch.7 Season 4". If it said "Lifetime" or an older season, change it first.

Step 2 — Read Kills: Kills = 710. 710 ÷ 10 = **71 points**.

Step 3 — Read Wins: Wins = 26. 26 × 5 = **130 points**.

Step 4 — Read K/D: K/D = 3.74. (3.74 – 2.0) × 5 = 8.7, rounded down = **8 points**.

Step 5 — Read Top 3/5/10: Top 3/5/10 = 89. 89 × 1 = **89 points**. (Ignore Top 6/12/25.)

Step 6 — Read both ranks: Battle Royale current = Platinum 2 = **30 points**. Reload current = Gold 2 = **20 points**. (Ignore All-Time Best.)

Step 7 — Add PR: PR = 12. 12 × 25 = **300 points**.

Step 8 — Total and ÷ 10: 71 + 130 + 8 + 89 + 30 + 20 + 300 = **648**. 648 ÷ 10 = **64.8 leaderboard points**.

Category	Player Stat	Calculation	Points
BR Rank	Platinum 2	Platinum tier	30
Reload Rank	Gold 2	Gold tier	20
Kills	710	710 ÷ 10	71
Wins	26	26 × 5	130
Top 3/5/10	89	89 × 1	89
K/D Bonus	3.74	(3.74 – 2.0) × 5	8
PR	12	12 × 25	300
RAW TOTAL			**648**
LEADERBOARD SCORE		**648 ÷ 10**	**64.8**

7. Blank Worksheet Per Member

Copy this table for each clan member. Fill in the stats, work down each row, then add the Points column.

Player name: _____

Category	Player Stat	Calculation	Points
BR Rank		Tier points	
Reload Rank		Tier points	
Kills		÷ 10	
Wins		× 5	
Top 3/5/10		× 1	
K/D Bonus		(K/D – 2.0) × 5, min 0	
PR		× 25	
RAW TOTAL			
LEADERBOARD SCORE		**Raw total ÷ 10**	

Player name: _____

Category	Player Stat	Calculation	Points
BR Rank		Tier points	
Reload Rank		Tier points	
Kills		÷ 10	
Wins		× 5	
Top 3/5/10		× 1	
K/D Bonus		(K/D – 2.0) × 5, min 0	
PR		× 25	
RAW TOTAL			
LEADERBOARD SCORE		**Raw total ÷ 10**	

Reminder: scoring is manual for now — take a fresh screenshot of each member's profile at the start of each scoring period, filtered to the current season. It's fine to split the member list between two people and then combine the results.
